Outline

Garun

features underimplementation

enlarge window to occupy the whole space and reset window to default (which occupied space equally)

I accidentally deleted enlarg-window-maximize, so I have to reimplement it

```
(global-set-key (kbd "C-x !") 'enlarge-window-maximize)
```

increase/decrease text size such that all other buffer text size will be adjusted at the same time. (not limited to opened buffer; all future buffer should also obey condition)

```
(defadvice text-scale-increase (around all-buffers (arg) activate)
  (dolist (buffer (buffer-list))
    (with-current-buffer buffer
      ad-do-it)))
```

create an environment that is added as text will be
